

Guide to Fabricating Pole and Plank

- Posts and infill should be cut to the required length
- To achieve the panel / plank size refer to the guide below
- Units up to 1000mm in height should be planted into the ground by a minimum of 600mm and by at least a third of the overall height thereafter
- For all units 3000mm high, the 60 x 40mm steel insert should be used
- Panels fabricated using the panel plank and bracing bar should be constructed from a 2mm rigid material with panel plank top and bottom and the bracing bar at both ends and 600mm centres thereafter

Quick Reference Guide

To achieve cutting sizes for panels / planks:

When using round posts + 14mm

When using square posts + 18mm

When using D posts + 14mm

When using Wall posts + 14mm

- ✓ Infill cut at post height minus panel height
- ✓ V Carrier / Composite Carrier cut at panel height

*The above has been issued purely as a guideline, and can differ for each individual project *
